EXPERIENCE

Wiser Imagery Services, LLC

Mar 2025 – Present

Maritime Geospatial Analyst (Apprentice), supporting Janus - Neptune (via Leidos)

Quality Control & Delivery (02/2026 - present):

- Perform final-round QC on Electronic Navigational Chart (ENC) cells after New Source Incorporation (NSI), reviewing attribution, topology, data integrity, and compliance with International Hydrographic Organization (IHO) standards and project specifications
- Validate, correct, and package approximately **3** ENC cells per week, of varying size, complexity, and geographical region, for delivery to the National Geospatial-Intelligence Agency (NGA)
- Provide corrective feedback to Production Analysts to improve and maintain data quality

Coordination & Training (01/2026 - present):

- Support new hire onboarding and training through group instruction and one-on-one mentorship
- Assign production cells based on workload, tasking, charge codes, and production schedules
- Contribute to workflow and documentation improvements, including guidance updates to **2** QC checklists, **1** of which was a deliverable

Production (03/2025 - 02/2026):

- Collected and attributed features from nautical charts, imagery, survey data, and foreign ENC sources
- Produced and validated ENC data according to S-57 and S-101 specifications and established workflows

Virtual Federal Student Service (USDA Forest Service)

Sept 2024 – Present

Historical GIS Intern

QA/QC, Workflow & Training (09/2026 - present):

- Perform QA/QC of county-level GIS data, ensuring spatial and attribute accuracy and consistency
- Modify geodatabase schema, field definitions, formatting conventions, and metadata standards to support scalability and consistency
- Develop standardized workflows, training materials, and QC procedures; onboard and train **3** new interns in Fall 2026

GIS Mapping & Research (09/2024 - present):

- To date, digitized **1,300+** historical cemeteries across **~3,000** square miles in **6** Kentucky counties from USGS topographic maps in ArcGIS Pro
- Utilized publicly available data (Google Maps, OpenStreetMap, Find a Grave, county historical society records) to identify and document **750+** cemeteries and their attributes prior to field verification
- Recommended contacting Ancestry for Find a Grave data, facilitated the request, and data-wrangled and spatially processed the dataset, reducing manual searches by **60%+**
- Proposed the use of Google Maps Street View and parcel data, identifying **13%** of previously unknown cemeteries
- Leveraged AI to develop Python code and an ArcGIS Notebook for GIS workflow optimization, including task automation

EDUCATION

Western Illinois University

Dec 2024

B.S., Mathematics & Geographic Information Science

Minor in Geology
